DATA PREPARATION FOR GRAPHICS PRODUCTION

General requirements of data preparation for digital printing of
DIGITAL PRINT ON FOIL, CONTOUR CUT

DATA PREPARATION

> Printable PDF, ideally >100dpi

> In order to avoid white gaps, we require a **3 mm bleed margin all round**

> Create data using a scale of 1:1 or 1:10, please label accordingly (...1to10.pdf)

> For open data: send fonts and all links (pack)

> Fonts must be converted into paths

> We need a vector path for the cut

> Various film qualities are used depending on the application

> Create colours in CMYK or PMS Pantone Solid Coated

> The subject must not be too fine. If you are unsure, please contact the SYMA project manager.

> The cut contour must be defined as follows:

>> Create a single layer for the cut

>> Colour the cut contour in a solid colour with the name CutContour

>> Do not set the cut contour to overprint

>> Define cut contour as a centrally positioned contour

EXAMPLES

Correct

Incorrect
Missing bleed margins

DATA DELIVERY

> As a matter of principle, we do not interfere with incorrectly delivered data.
  After consultation, we can adapt your file at a cost of CHF 120.00 per hour.

> The printable data must be submitted by the specified deadline at the latest (you will be notified
  of this by your SYMA project manager). In the event of delays in delivery or delivery of
  data that is not printable, we cannot guarantee timely production.

> For a data volume of < 2 GB, you can send us the data via **www.wetransfer.com**.

> For a data volume > 2 GB, please contact your SYMA project manager.
